Andor Vanadium Flow Battery

Overview

The vanadium redox battery (VRB), also known as the vanadium flow battery (VFB) or vanadium redox flow battery (VRFB), is a type of rechargeable which employs ions as . The battery uses vanadium's ability to exist in a solution in four different to make a battery with a single electroactive element instead of two.

Self-contained and incredibly easy to deploy, they use proven vanadium redox flow technology to store energy in an aqueous solution that never degrades, even under continuous maximum power and depth of discharge cycling. Our technology is non-flammable, and requires little maintenance and upkeep.
