# Austria outdoor power supply cost-effective recommendation

## Overview

---

What is the capacity of the Austria power market in 2021?

The cumulative installed capacity in the Austria power market was 26.9 GW in 2021. It is expected to grow at a CAGR of more than 4% during the forecast period. The Austria power market report discusses the power market structure of Austria and provides historical and forecast numbers for capacity, generation, and consumption up to 2035.

Does Austria have a reliable electricity supply network?

Actually, the country has a highly reliable electricity supply network thanks to the diversified mix of energy sources. Austria's power output is comprised by a 4% solar, 10% wind, 14% natural gas and biomass, and between 55% and 67% of hydropower (Edwardes-Evans, H. 2023: 14) 5. 1 & 2 IEA (2023). Austria data explorer. 3 IEA (2023).

What are the different types of power in Austria?

The key types of power in Austria power market are thermal power and hydropower. In 2020, Austria shut down its last coal-fired power plant as part of a plan to end electricity generation by fossil fuels by 2030. The Austrian government has plans to shut the gas-fired plants by 2030 and generate all the energy via renewable energy resources.

Why is Austria a good place to buy electricity?

Austria is geographically well located and interconnected with the neighbouring countries via the European electricity system, thus facilitating cross-border trading. The electricity market liberalized on 1 October 2001, vertically integrated several companies instead of having a monopolistic structure.

What is energy policy in Austria?

The Federal Electricity Management and Organization Act 2010 (Electricity Act

2010) is the main source of energy policy in Austria. The act aims to regulate an equal, fair, consumer-friendly, and transparent energy market.

How is energy used in Austria?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.
