Many homeowners install solar and expect backup power automatically. That expectation often comes from mixing up what a solar inverter does and what a solar battery does. The inverter converts electricity. The battery stores electricity. Both are valuable, but they solve different problems. This.

The inverter converts energy from the sun into usable electricity, while the battery stores excess power for future use. This setup ensures a steady energy supply, even at night or during low sunlight, making it a reliable solution for renewable energy needs. By combining a solar inverter with.
