# Battery Energy Storage for East African Telecommunication Base Stations

## Overview

---

Which battery is best for a telecom base station?

REVOV's lithium iron phosphate (LiFePO<sub>4</sub>) batteries are ideal telecom base station batteries. These batteries offer reliable, cost-effective backup power for communication networks. They are significantly more efficient and last longer than lead-acid batteries.

What is a telecom battery backup system?

A telecom battery backup system is a comprehensive portfolio of energy storage batteries used as backup power for base stations to ensure a reliable and stable power supply. As we are entering the 5G era and the energy consumption of 5G base stations has been substantially increasing, this system is playing a more significant role than ever before.

Should telecommunication operators invest in a telecom battery backup system?

Investing in a telecom battery backup system is always one of the priorities for telecommunication operators in the 5G era. Sunwoda 48V telecom batteries have a capacity covering 50Ah-150Ah, which can easily meet the power backup needs of macro and micro base stations.
