Cadmium Telluride Solar Panel Project

Overview

Success of cadmium telluride PV has been due to the low cost achievable with the CdTe technology, made possible by combining adequate efficiency with lower module area costs. Direct manufacturing cost for CdTe PV modules reached \$0.57 per watt in 2013, and capital cost per new watt of capacity was about \$0.9 per watt (including land and buildings) in 2008.

The Cadmium Telluride (CdTe) PV Perspective Paper (PDF) It presents SETO's priorities to advance CdTe technology through investments to reduce costs, address materials availability and supply chain costs, and support the ongoing scale-up of CdTe technology within the domestic utility-scale PV market.
