China-Africa lithium energy storage power sales

Overview

Does Africa's first Chinese-owned lithium concentrate plant have competition?

But it has competition. Last month, Africa's first Chinese-owned lithium concentrate plant started up trial production at Arcadia, in Zimbabwe. That mine was bought by Huayou Cobalt in 2021 for \$422mn, part of a recent billion-dollar wave of Chinese lithium deals in a country where many western investors fear to tread.

Could AVZ minerals be Africa's biggest untapped lithium deposit?

At Manono in the DRC, an old tin mining area like Uis that could be Africa's biggest untapped lithium deposit, Australia's AVZ Minerals is locked in a legal battle with China's state-backed Zijin Mining over the ownership structure of the concession. Its shares have been suspended since last May as a result.

Why is Europe a leading producer of lithium?

Despite having limited natural resources and almost no stakes in the mining of lithium, Europe has succeeded in controlling a significant share of the global production of nickel, cobalt, and manganese, thereby securing a position among the top three producers of these raw materials.
