China Power Base Station

Overview

Will China build a nuclear power station on the Moon?

China and Russia plan to build an automated nuclear power station on the moon by 2035. A memorandum of cooperation for the project was signed between Russia's space agency Roscosmos and the China National Space Administration (CNSA) this week.

Which power stations are in mainland China?

The following page lists some power stations in mainland China, sorted by energy source and location. The Three Gorges Dam is the world's largest electricity-generating plant of any kind. Total capacity will be 3 GW in 3 phases. Phase I completed in October 2011, followed by Phase II and III. 60 MW phase IV under construction.

Does China support Russia's nuclear power plant in space?

Russia's expertise in space-based nuclear technology is a critical asset, given its history of success in deploying nuclear power plants in space. Although China has not officially confirmed its commitment to the reactor, Pei's presentation to officials from 17 countries suggests strong backing from Beijing.

Could China's nuclear power plant revolutionize space exploration?

China's rapid ascent in the space arena over the past two decades is remarkable. From launching its first astronaut in 2003 to landing a rover on Mars, China is now poised to build a nuclear power plant on the Moon. This move could redefine space exploration, enabling large-scale operations like energy generation and cargo transport.
