Chromium iron flow battery

Overview

Hruska et al. introduced the IRFB in 1981 and further analysed the system in terms of material choice, electrolyte additives, temperature and pH effect. The group set the groundwork for further development. In 1979, Thaller et. al. introduced an iron-hydrogen fuel cell as a rebalancing cell for the chromium-iron redox flow battery which was adapted 1983 for the iron-redox flow batteries by Stalnake et al. Further development went into the fuel cell as a separate system.
