

## Kongres Container

# Colombia Container Power Generation BESS

## Overview

---

Does Colombia have a power purchase agreement for hybrid solar & Bess projects?

As of now, Colombia's reliability charge (Cargo por Confiabilidad) has encouraged hybrid solar + BESS projects to progress. Large energy companies have expressed that there are no Power Purchasing Agreements (PPAs) available specifically for stand-alone storage projects, making it harder to finance those projects.

What are the benefits of a Bess energy storage system?

- Flywheels: Store energy in the form of kinetic energy, suitable for short-term storage and high-power applications. BESS offer a range of benefits, from energy independence to cost-effectiveness, that make them integral to modern energy management strategies. Let's dig into them now.

What are Cummins Power Generation Bess solutions?

Cummins Power Generation BESS solutions are available in two architectural designs: a 10ft container (200 to 400kWh) and a 20ft high cube container (600kWh to 2MWh).

Are energy storage containers a viable alternative to traditional energy solutions?

These energy storage containers often lower capital costs and operational expenses, making them a viable economic alternative to traditional energy solutions. The modular nature of containerized systems often results in lower installation and maintenance costs compared to traditional setups.

How long should a Bess shipping container be?

Standard shipping containers, typically 20 or 40 feet in length, offer ample space for housing BESS components while maintaining a compact footprint. The portability of shipping containers allows for easy relocation of BESS as

needed, providing flexibility for changing energy needs.

How many GW of Bess are there?

These include not balancing supply and demand, having to stop production due to grid problems, and low energy prices in the market. Our group currently operates about 1.6 GW of BESS, mainly in the United States. There is also a global growth plan between now and 2026 for an additional 2.8 GW, of which nearly 2 GW is already under construction.
