Construction of China-Ukraine large-scale energy storage project begins

Overview

PowerChina has begun construction on what is claimed to be the world's largest generation-side electrochemical energy storage project.

PowerChina has begun construction on what is claimed to be the world's largest generation-side electrochemical energy storage project.

With a capacity of 2 GWh, the four-hour storage system is described as the largest lithium iron phosphate energy storage project in the country. The first phase of the Huadian Xinjiang Kashgar, China's largest standalone battery energy storage project, was commissioned on July 19. The 500 MW/ 2 GWh.

PowerChina has begun construction on what is claimed to be the world's largest generation-side electrochemical energy storage project. On June 30, PowerChina announced that an official groundbreaking had taken place for the 1,000MW/6,000MWh facility in Chayouzhong Banner, Ulanqab, Inner Mongolia.

The largest pumped storage power station in terms of capacity in East China has entered the full-scale construction phase. [Photo provided to chinadaily.com.cn] The largest pumped storage power station in terms of capacity in East China has entered the full-scale construction phase and is scheduled.

RWE has begun construction of one of Germany's largest battery storage facilities at its power plant locations in Neurath and Hamm. The facility will have a capacity of 220 megawatts (MW) and storage capacity of 235 megawatt hours (MWh). A total of 690 lithium-ion battery blocks will be installed.

In recent weeks, Chinese energy storage companies have made remarkable progress in global markets, winning a series of large-scale overseas contracts across diverse application scenarios including solar-plus-storage, grid-side, user-side, and data center projects, showcasing the strong.

DTEK's Fluence Gridstack battery units at one of six energy storage sites

across Ukraine, part of the country's largest battery energy storage project announced on July 10, 2025. (DTEK press service) DTEK, Ukraine's biggest private energy company, has begun final commissioning of the country's. What is the largest grid-forming energy storage station in China?

This marks the completion and operation of the largest grid-forming energy storage station in China. The photo shows the energy storage station supporting the Ningdong Composite Photovoltaic Base Project. This energy storage station is one of the first batch of projects supporting the 100 GW large-scale wind and photovoltaic bases nationwide.

What is China's Energy Storage plan?

The plan's target represents a significant scaling up, even for the world's leading adopter and producer of energy storage technologies. According to official National Energy Administration data from its recent 'China new energy storage development report 2025,' the country's installed base at the end of 2024 totalled 73.8GW/168GWh.

How big is China's Energy Storage Base?

According to official National Energy Administration data from its recent 'China new energy storage development report 2025,' the country's installed base at the end of 2024 totalled 73.8GW/168GWh. The China Energy Storage Alliance (CNESA) trade group said this represented a 130% year-on-year increase and about 40% of the global total.

How much money will China spend on energy storage?

According to an announcement from the State Council of the People's Republic of China, this would drive about RMB250 billion (US\$35.2 billion) in direct project investment. The plan's target represents a significant scaling up, even for the world's leading adopter and producer of energy storage technologies.

What is China's energy storage policy & regulatory roadmap?

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage – primarily lithium-ion battery energy storage systems (BESS) – to 180GW by the end of 2027.

What is the 'Special Action Plan' for new energy storage?

The 'Special action plan for large-scale construction of new energy storage (2025-2027)' was published last Friday (12 September), formulated jointly by the country's National Development and Reform Commission and National Energy Administration (NEA).
