Cost of double-glass solar panels

Overview

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below).

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below).

The price of solar double glass typically ranges between \$0.75 to \$1.50 per watt, depending on various factors. 1. Quality of materials is crucial; high-quality double glass panels offer better durability and efficiency, resulting in a higher initial investment but lower long-term costs. 2. Market.

Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

Solar panels cost \$1,200 per panel, depending on the type of panel, home size, energy usage, and labor. IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies 'Thin film a-Si/u-Si or Global Price Index (from Q4 2013)'. This data is expressed in US dollars per watt, adjusted for inflation. IRENA (2025); Nemet.

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type.

Consider solar panels if you have a high utility bill, get lots of sun and qualify for tax breaks or other savings. Some or all of the mortgage lenders featured

on our site are advertising partners of NerdWallet, but this does not influence our evaluations, lender star ratings or the order in which. Why are solar panels so expensive?

Since 2010, the cost to install solar panels on a home has fallen by roughly 50%. Costs rose slightly from 2020-2023 largely due to supply chain tangles from the pandemic, and then fell again in 2024. Prices have ticked upward slightly in 2025 due to tariffs and a rush for solar before the 30% consumer solar tax credit expires on December 31, 2025.

How much does a home solar system cost?

In 2025, we surveyed 1,000 home solar customers across the U.S. to understand their experience shopping for and installing solar panel systems. Most homeowners said they paid around \$16,129 for a solar panel system, with an average of 14 solar panels installed.

How much do solar panels cost?

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.

How much do solar panels cost in 2024?

That being said, the cost of solar panels isn't a one-size-fits-all figure. Several factors play into the final price you'll pay for solar energy, and understanding these variables is crucial. The average cost for solar panels in 2024 is around \$2.50 to \$3.50 per watt. This price includes both the cost of the panels and installation.

How much does a 10 kW solar system cost?

For example, while a small 4 kW system might cost around \$3 per watt, a larger 10 kW system might only cost \$2.50 per watt. Not all solar panels are created equal. There are three main types of solar panels used in most residential installations:
