# Cuba s new outdoor power supply

## Overview

---

Parts of Cuba experienced blackouts starting on 8 February 2024. On February 13, 45% of the country was affected by power outages. In March 2024, Cuba experienced large-scale power outages, amidst an economic crisis that hit the country. The blackouts, which peaked on 17 March and typically lasted for up to 18 hours a day, were due to the frequent breakdowns of the Antonio Guiteras Thermoelectric Power Plant.

The new project consists of 44,000 solar panels across 55 photovoltaic solar parks. Several of them will occupy sites that had previously been dedicated to Soviet-funded nuclear power plants, which have sat abandoned since the USSR collapsed.

The National Electric System, most of which was built after 1959, hasn't received the investment and maintenance it needs for 35 years—a consequence of Cuba's complex political and economic history. If neglect continues, the island nation will pay the high price of further economic decline, and.

The new project consists of 44,000 solar panels across 55 photovoltaic solar parks. Several of them will occupy sites that had previously been dedicated to Soviet-funded nuclear power plants, which have sat abandoned since the USSR collapsed. Currently, Cuba generates power from just eight.

A series of interruptions to the nationwide electrical service of Cuba occurred during the months of February, March, October and December 2024. The blackouts began in February 2024 with power outages that affected nearly half of the country. In March, further blackouts caused widespread protests.

Cuba produces around 40,000 barrels of oil per day, but needs about 120,000 to cover its energy needs. But Cuba must still supply the fuel. This has become a problem. Cuba produces around 40,000 barrels of oil per day, but needs about 120,000 to cover its energy needs. What is Cuba's energy

supply?

.

Last month, Cuba experienced significant power blackouts, plunging the island into darkness. The blackouts resulted from ongoing issues with the country's aging and underfunded power grid, compounded by natural disasters and economic hardships. Tropical storm and hurricane activity in the Caribbean.

On Friday, around midday, the island's largest power plant shut down, triggering Cuba's biggest blackout in at least two years. With little else to do during the blackout, residents played frisbee in Havana. Pic: AP Authorities in Cuba have suffered a third major setback to restoring power, leaving.
