Distance between battery cabinet and building

Overview

How far apart should storage units be positioned?

Therefore, if you install multiple storage units, you have to space them three feet apart unless the manufacturer has already done large-scale fire testing and can prove closer spacing will not cause fire to propagate between adjacent units.

How far should ESS units be separated from each other?

In Section 15.5 of NFPA 855, we learn that individual ESS units shall be separated from each other by a minimum of three feet, unless smaller separation distances are documented to be adequate and approved by the authority having jurisdiction (AHJ) based on large-scale fire testing.

How many kWh can a house use?

The diagram also shows that if you're inside the home, you can go up to 40 kWh; if you're outside the home on the wall, you can go up to 80 kWh; and if you're in a garage, you could also have 80 kWh there. All locations will require multiple units to reach the 40/80 kWh limit, which is fine as long as they're adequately spaced per this code.
