# Does Romania need to have solar energy storage

## Overview

---

Prosumers in Romania will be obliged to install energy storage systems according to new Law 255/2024, adopted last week in the Chamber of Deputies' plenary session. The new regulation applies to homeowners with PV systems with a capacity between 10.8 kW and 400 kW.

Prosumers in Romania will be obliged to install energy storage systems according to new Law 255/2024, adopted last week in the Chamber of Deputies' plenary session. The new regulation applies to homeowners with PV systems with a capacity between 10.8 kW and 400 kW.

Romania's parliament has adopted a bill mandating prosumers with PV systems with capacities from 10.8 kW to 400 kW to install energy storage systems. From pv magazine ESS News site Prosumers in Romania will be obliged to install energy storage systems according to new Law 255/2024, adopted last.

l and Regulatory Framework, December 2020. The European Green Deal, with its flagship policy, the Climate Law, is set to enshrine into law the target of net-z first did not address storage technology. The updated version of 2020 was marginally improved in this respect, listing 'developing storage.

Romania could see an unprecedented surge in the photovoltaic sector in 2025, boosted by funding programs such as Casa Verde and RePower EU, the liberalization of energy prices, and the general increased interest of Romanians in getting rid of the worry about bills and becoming energy independent.

According to the proposed law, energy storage systems will be a must for prosumers installing solar PV systems ranging between 10.8 kW and 400 kW capacity. Solar PV systems with a capacity between 3 kW and 200 kW will need to have storage systems representing at least 30% of the installed power of.

Home Innovation Romania advances energy transition with major battery storage and solar panel manufacturing. Romania's Ministry of Energy has

reached two additional milestones under the National Recovery and Resilience Plan (PNRR) related to battery storage capacities and photovoltaic panel.

Romania is another European country planning to significantly expand its investments in energy storage. According to the Minister of Energy, at least 2.5 GW of battery systems will be built by the end of next year, with the goal of reaching 5 GW a year later. Romania is focusing on renewable. How much solar power does Romania have?

Through the updated National Energy and Climate Plan, Romania committed to reaching an installed capacity of 10 GW in solar PV, out of which 6,4 GW in utility-scale projects and 3,5 GW in prosumers. Today, we stand at an even split of 2,5 GW for each segment.

How much will Romania spend on solar PV in 2024?

For rooftop PV, the budget for 2024 was 400 million EUR, and included, for the first time, storage. Through the updated National Energy and Climate Plan, Romania committed to reaching an installed capacity of 10 GW in solar PV, out of which 6,4 GW in utility-scale projects and 3,5 GW in prosumers.

Is Romania's future energy landscape favorable to storage?

Romania's future energy landscape is expected to be favorable to energy storage, with around 480 MWh of capacity planned to be deployed by the end of 2025, according to Balan. He also mentioned plans for a 2 GW battery industry by the same year.

How does Romania support the production of solar / PV energy?

The Romanian State supports the production of solar / PV energy by offering six (6) green certificates for each MWh produced and injected into the grid.

What is Romania doing with solar?

Romania is developing 310 MW of solar at one of its coal power facilities and supporting rooftop PV deployment via the Casa Verde Fotovoltaice (green PV home) scheme for residential solar installations, under the national net metering regime.

How is Romania supporting rooftop solar?

Romania supports rooftop solar installations through the Casa Verde

Fotovoltaice (green PV home) scheme, which is part of the national net metering regime. According to the latest statistics from the International Renewable Energy Agency, Romania had 1.39 GW of solar installed by the end of 2020. Romania is also promoting rooftop PV deployment.
