Double-glass solar panel

Overview

What is a double glass solar panel?

Traditional solar panels typically feature a glass front and a polymer backsheet. In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers.

What are the advantages of double glass solar panels?

Environmental shielding: Double glass modules provide excellent defense against moisture, corrosion, and UV radiation, reducing the risk of potential-induced degradation (PID). **Thermal stability:** The identical thermal expansion coefficients of the glass layers minimize stress on solar cells during temperature fluctuations.

Why are double glass solar panels bifacial?

Thermal stability: The identical thermal expansion coefficients of the glass layers minimize stress on solar cells during temperature fluctuations. **Dual-sided energy Capture:** Many double glass modules are bifacial, allowing them to harness sunlight from both sides.

What are glass-glass solar panels?

[Home » 2025 Complete Guide to Glass-Glass Solar Panels: The Top Choice for Challenging Environments](#) [What Are Glass-Glass PV Modules?](#)

Glass-glass PV modules, also known as double glass solar panels, are photovoltaic modules encapsulated with tempered glass on both the front and back sides.

Can dual-glass solar panels increase solar energy production?

Installing dual-glass panels on a reflective surface, like a white rooftop, can

increase solar energy production. That's because nowadays, dual-glass solar modules use bifacial cells throughout, and this power is generated from both sides of the panel instead of just one. The image shows the layers of the Vertex S+ dual glass modules.

What is the difference between Raytech double glass solar modules?

Whereas for Raytech double-glass solar modules, with the increased strength brought by two layers of glass, a lot less deformation will happen in the solar cells, the possibility of microcracks formed on the solar cells will decrease significantly.
