EU Energy Batteries and Energy Storage

Overview

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

Should battery energy storage systems be regulated in Europe?

EU Regulations for Battery Energy Storage Systems: Battery Energy Storage Systems (BESS) are at the heart of Europe's clean energy transition. By storing renewable electricity, they stabilize grids, reduce fossil fuel dependency, and enable smarter energy management. But with great opportunity comes strict regulation.

When was battery storage installed in Europe?

of battery storage capacity was installed in Europe at the end of 2023. Your expert for questions The European energy landscape is undergoing a profound change: the driver of this development is the ever-faster integration of renewable energy sources in order to reduce carbon emissions and achieve climate targets.

What is the battery storage Europe platform?

The Battery Storage Europe Platform brings together industry leaders representing the battery storage value chain to advance the business case and regulatory frameworks for battery storage across the EU. Together, we urge a tenfold increase in battery storage by 2030 to ensure Europe's energy transition, security, and competitiveness.

How to generate revenue from battery energy storage systems in Europe?

To generate revenue from battery energy storage systems in Europe,

companies need to be strategic and take advantage of different markets and services. Capacity markets, for example, offer a stable source of income: payment is made for the provision of reserve capacity.

Is battery storage a political priority in Europe?

We're accelerating battery storage across Europe by making it a political priority: 10X by 2030! In 2024, Europe installed 21.9 GWh of new battery storage capacity: 11th consecutive record breaking year of annual additions
Annual growth slows down in 2024 to 15%: inflection point toward next strong growth phase, led by grid-scale deployment
