# Economic Analysis of Energy Storage in New Energy Stations

## Overview

---

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

Do independent energy storage power stations lease capacity?

Independent energy storage stations lease capacity to wind power, PV, and other new energy stations. Capacity leasing is a stable source of income for owners of independent energy storage power stations. The capacity leased can be seen as energy storage capacity built for new energy projects.

Why are energy storage technologies important?

They are also strategically important for international competition. KPMG China and the Electric Transportation & Energy Storage Association of the China Electricity Council ('CEC') released the New Energy Storage Technologies Empower Energy Transition report at the 2023 China International Energy Storage Conference.

What is the economic effect of energy storage construction?

The economic effect of energy storage construction has received increasing attention in recent years, as the use of renewable energy sources has grown, and the need for reliable and flexible power systems has become more pressing.

Is energy storage construction a good investment?

Overall, the available literature suggests that energy storage construction can have significant economic benefits, including reduced costs of power generation, improved reliability of the power grid, and reduced carbon emissions. However, the existing research has mainly focused on the energy sector in a national or global region.

Are independent energy storage stations a good investment?

This does not augur well for the market in terms of long-term competition. There will be safety risks associated with excessive cost control and an indifference to quality. Independent energy storage stations enjoy good long-term prospects, though this segment is sluggish in the short term.
