Energy storage battery export

Overview

How much battery material does China Import & Export?

China imported almost 12 million short tons of raw and processed battery minerals, accounting for 44% of interregional trade, and exported almost 11 million short tons of battery materials, packs, and components, or 58% of interregional trade in 2023, according to regional UN Comtrade data.

Which country exports the most battery cells in the world?

China accounted for 74% of the world's battery pack and component exports in 2023. That same year, China controlled nearly 85% of the world's battery cell production capacity by monetary value. Data source: United Nations Statistics Division, UN Comtrade Note: Excludes trade within regions.

Do you need a license to export lithium ion batteries?

Specifically, exports of lithium-ion battery cells or packs with a weight energy density of 300 Wh/kg or higher will now require a license. In addition, specialized manufacturing equipment such as winding machines, lamination machines, liquid injection machines, and capacity cabinets are also listed as controlled items.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

How are batteries made?

These minerals are mined or extracted from natural and synthetic sources, processed for battery material manufacturing, and then used to produce batteries and battery components, with robust trade at each stage.

What is battery mineral production & raw battery minerals trade?

Battery mineral production and raw battery minerals trade Lithium is produced through brine extraction or hard rock mining, cobalt is primarily produced as a byproduct of nickel and copper mining, and graphite is mined as a natural ore or synthetically produced from pitch and coke.
