Estonian communication base station hybrid energy

Overview

Estonian operator Elisa said it equipped nearly 100 base stations with new lithium batteries integrated with an Artificial Intelligence (AI)-based energy management system in 2023. Can small base stations conserve grid energy in hybrid-energy heterogeneous cellular networks?

Abstract: Dense deployment of small base stations (SBSs) within the coverage of macro base station (MBS) has been spotlighted as a promising solution to conserve grid energy in hybrid-energy heterogeneous cellular networks (HCNs), which caters to the rapidly increasing demand of mobile user (MUs).

What is a hybrid solar PV / BG energy-trading system?

A hybrid solar PV / BG energy-trading system between grid supply and BSs is introduced to resolve the utility grid's power shortage, increase energy self-reliance, and reduce costs.

What is hybrid solar PV / wt / BG?

Given the geographical position, the hybrid solar PV / WT / BG system along with appropriate energy storage devices is an effective solution for developing green cellular connectivity. It offers a potential solution for bridging the gap between high data rates and long idle times in the 5G mobile network .

Can hybrid-energy hcns maximize EE?

It is shown that the proposed scheme outperforms other schemes and can also maximize the EE in hybrid-energy HCNs.

Does a hybrid approach improve EE and SE performance in small cells?

For small cells in UDN, a hybrid approach optimizing both EE and SE is required with the constraints of high data rate and interference thresholds. It was observed that, with a slight decline in SE performance, the EE may be greatly enhanced.
