# Expected new energy storage in 2025

## Overview

---

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity.

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity.

EIA is continuing normal publication schedules and data collection until further notice. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount.

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector continues to grow as developers push forward with larger and larger utility-scale projects. Since 2024.

The future of energy storage is unfolding before our eyes, reshaping how we power our world. It's like watching the early days of smartphones—we know we're witnessing something revolutionary, but the full impact is still unfolding. For those wondering where this technology is heading, the trends.

The US energy storage market just posted its strongest Q1 ever, adding more than 2 gigawatts (GW) of capacity across all segments, according to the latest US Energy Storage Monitor from Wood Mackenzie and the American Clean Power Association (ACP). That makes Q1 2025 the biggest first quarter for.

The Inflation Reduction Act's provisions spurred hundreds of billions in new manufacturing investments across the country, passing nearly \$600 in total private investment since it was passed in 2022. Solar energy, wind energy, battery storage, and electric vehicle deployment all hit new highs.

Solar power and battery storage are expected to lead new U.S. generating capacity additions in 2025, according to the Energy Information Organization (EIA). The EIA expects 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. grid in 2025. This is 30% higher.
