# Finland s telecommunications base station power supply infrastructure

## Overview

---

Elisa, a leading Finnish telecom operator, partnered with Elisa DES to transform its network of mobile base stations into a distributed virtual power plant (VPP). This innovative initiative leverages AI to optimize energy use, reduce costs, and support Finland's green energy.

Elisa, a leading Finnish telecom operator, partnered with Elisa DES to transform its network of mobile base stations into a distributed virtual power plant (VPP). This innovative initiative leverages AI to optimize energy use, reduce costs, and support Finland's green energy.

Fifth-generation mobile networks provide telecom operators with a potentially large new source of revenue — and one of its most challenging projects. To maximise the benefits of 5G, telecom operators need to deploy the networks as quickly and efficiently as possible, across urban and remote areas.

Elisa, a leading Finnish telecom operator, partnered with Elisa DES to transform its network of mobile base stations into a distributed virtual power plant (VPP). This innovative initiative leverages AI to optimize energy use, reduce costs, and support Finland's green energy transition. Elisa.

Elisa is transforming the backup batteries in its mobile network base stations into a smartly controlled, distributed virtual power plant with a capacity of 150 MWh, which serves as part of the grid balancing reserve for the Finnish electricity grid. This new power plant can be used for.

Finland's Elisa has developed a cloud-based system to make its RAN part of the nation's renewable energy infrastructure. Around two years ago the Finnish service provider Elisa saw a business case for making its mobile network part of the national virtual power plant (VPP) infrastructure. Now its.

y sources (RES) introduces new stability challenges for power grids. Despite the substantial electrical consumption of mobile networks, they are yet to harness their inherent flexibility for aiding in the stability of the power grid. A noticeable research gap exists concerning measuring full.

Finland telecommunications firm Elisa has received €3.9 million (US\$4.17 million) from the government to form a VPP using batteries which could be the largest of its kind in Europe. The company will put the funding towards a rollout of its Distributed Energy Storage (DES) solution across its.
