Gabon s new lithium iron phosphate battery pack

Overview

Are lithium iron phosphate batteries better than other lithium ion chemistries?

Despite having a lower energy density than other lithium-ion chemistries, lithium iron phosphate batteries can provide better power density and longer life cycles. Emerging Power is your premier lithium battery assembler. We manufacture custom lithium iron phosphate battery packs and assemblies for many applications.

What is a rechargeable lithium iron phosphate battery?

Rechargeable lithium iron phosphate batteries use LiFePO_4 as the principle cathode material. Despite having a lower energy density than other lithium-ion chemistries, lithium iron phosphate batteries can provide better power density and longer life cycles. Emerging Power is your premier lithium battery assembler.

What is lithium iron phosphate (LFP)?

Lithium iron phosphate (LiFePO_4), also called LFP, is one of the more recently-developed rechargeable battery chemistries and is a variation of lithium-ion chemistry. Rechargeable lithium iron phosphate batteries use LiFePO_4 as the principle cathode material.

What is lithium hexafluorophosphate in a LiFePO_4 battery pack?

The electrolyte in a LiFePO_4 battery pack serves as the medium for the transport of lithium ions between the anode and the cathode. It is typically composed of a lithium - containing salt dissolved in an organic solvent. Lithium hexafluorophosphate (LiPF_6) is a commonly used salt in the electrolyte.

Are lithium-ion batteries ethical?

Cobalt is a crucial component in many lithium-ion batteries. It is associated with environmental and ethical concerns due to mining practices in some

regions. LiFePO₄ batteries, on the other hand, contain no cobalt. So, mitigating concerns related to its scarcity and unethical sourcing is not a worry.
