Gel battery inverter settings

Overview

What float voltage should a Deye inverter be set to?

This setting is called BULK in many inverters, or absorption in others like Deye. Float Voltage: Set the float voltage to 55.5V or a maximum of 56.0V. This maintains the battery at full charge without overcharging. Cutoff Voltage: The discharge cutoff voltage should be set to 48.0V.

What are inverter settings?

Inverter Settings 1. To set output voltage of inverter - This is normally 230 Vac. Possible values 210V ~ 245V. 2. Used to enable/disable the internal ground relay functionality. Connection between N and PE during inverter operation. - The ground relay is useful when an earth-leakage circuit-breaker is part of the installation.

How do I adjust battery voltage?

If you're using a different battery setup, such as a 15-cell or 8-cell configuration, you can adjust these settings accordingly: 15-Cell Batteries: Divide the recommended 16-cell voltage by 16 and multiply by 15. 8-Cell Batteries: Divide the voltage by 2. 4-Cell Batteries (12V systems): Divide the voltage by 4.

How to ensure optimal battery life?

To ensure optimal battery life, set the inverter / charge controller charge current not to exceed the maximum charge current. It is recommended to set it at 50% lower than the maximum charge current of the battery. For batteries connected in series, the maximum charge current will still be the same as for a single battery!.

How does a battery inverter work?

After the battery is charged, you want to keep the battery "full", despite loads. So the inverter targets a lower constant battery voltage, this is the float

voltage. When the battery voltage dips below the float voltage, current flows back into the battery to keep the battery full. Most of it will actually flow to the load.

What is a good charging voltage for a Deye inverter?

Upper Voltage Limit: Set the upper charging limit to 55.5V. If necessary, you can push this up to 56.0V, but going beyond this increases the risk of damaging your cells. This setting is called BULK in many inverters, or absorption in others like Deye. Float Voltage: Set the float voltage to 55.5V or a maximum of 56.0V.
