# Georgia s grid-connected solar panels

## Overview

---

Five solar power plants are set to be connected to the national energy grid for the first time in Georgia's history, marking a historic step for the country's renewable energy development. How many solar panels are there in Georgia?

There are over 220 solar panel installation companies in Georgia.

What is a grid tied solar system?

A grid tied solar system is the most popular and cost-effective way to harness solar energy for your home or business. Unlike off-grid systems that require expensive battery storage, grid-tied systems connect directly to your local utility grid, allowing you to generate clean electricity while maintaining reliable power access 24/7.

How does a grid-tied solar system work?

Understanding the operation of a grid-tied solar system involves following the energy flow from sunlight to usable electricity in your home. Net metering is the billing mechanism that makes grid-tied solar systems financially attractive.

How much does a grid-tied solar system cost?

Grid-tied solar dominates the market for good reason: With 2025 system costs ranging from \$2.50-\$4.00 per watt installed and federal tax credits of 30% through 2032, grid-tied systems offer the fastest payback periods (6-10 years) and highest returns on investment without requiring expensive battery storage.

Are grid-tied solar systems financially viable?

Net metering remains the financial foundation: The ability to export excess solar production to the grid and receive credits makes grid-tied systems financially viable, though homeowners should verify their utility's net metering policies as these programs face ongoing regulatory changes in many states.

How do solar panels work?

When your solar panels produce more electricity than you're using, the excess power flows back into the grid through a process called net metering. Conversely, when your panels aren't producing enough power (at night or during cloudy weather), you draw electricity from the grid just like before installing solar.
