Group Energy Storage Project

Overview

How will a 100MW battery energy storage system work?

The facility will serve as a large-scale battery energy storage system capable of charging from, and discharging into, the New York power grid. When fully functional, the 100MW battery energy storage project will be able to discharge electricity to the grid particularly during peak demand.

Will energy storage help a modern power grid?

Alliance for Clean Energy New York Executive Director Marguerite Wells said, “Energy storage will provide many benefits to a modern power grid, including the ability to fully harness our most cost-effective energy solutions in wind and solar.

Should bulk energy storage be added to New York's grid?

Adding bulk energy storage to New York’s grid will lower costs, optimize the generation and transmission of power, enhance energy grid infrastructure, and ensure the reliability and resilience of the State’s electricity system.

What is bulk energy storage & how can it help New York?

New York Secretary of State Walter Mosley said, “In looking ahead for the state's future, bulk energy storage can provide the ability to store excess electricity during times of lower usage or high renewable production and return that electricity to the grid during peak times when it’s needed most.

Why is energy storage important in New York?

New York State Department of Environmental Conservation Commissioner Amanda Lefton said, “Energy storage is fundamental to help ensure reliability while New York continues to invest in renewables and reduce greenhouse gas emissions that are polluting our air and negatively impacting quality of life for New Yorkers.

Are battery energy storage systems regulated in New York City?

Battery energy storage systems in New York City are rigorously regulated, with oversight from the safety industry, federal, state, and local authorities. All code, location, spacing, and other local requirements must be met.
