Guatemala space-based solar base station

Overview

Space-based solar power (SBSP or SSP) is the concept of collecting in with solar power satellites (SPS) and distributing it to . Its advantages include a higher collection of energy due to the lack of and absorption by the , the possibility of very little night, and a better ability to orient to face the Sun. Space-based solar power systems convert

The project includes over 168,000 solar panels and 240 inverters, and will connect to the national grid via the Jaguar Energy Substation. Approved through public tender in August 2023, the project has also received environmental clearance from the Ministry of Environment and Natural Resources.
