How do mobile base stations communicate

Overview

A is a network of handheld (cell phones) in which each phone communicates with the by through a local antenna at a cellular base station (cell site). The coverage area in which service is provided is divided into a mosaic of small geographical areas called "cells", each served by a separate low power multichannel and antenna at a base station. All the cell phones within a cell communicate with the system thr.

A base station is a fixed point of communication between mobile devices and the wider telecom network. It transmits and receives radio signals, enabling your phone to access voice, data, and internet services.
