# How long does it take for a portable power bank to discharge

## Overview

---

Typically, a power bank can retain its charge for 3 to 6 months when stored properly. However, self-discharge rates vary by battery quality and temperature. Regular use and periodic recharging every 2–3 months are recommended for best performance and battery longevity.

Typically, a power bank can retain its charge for 3 to 6 months when stored properly. However, self-discharge rates vary by battery quality and temperature. Regular use and periodic recharging every 2–3 months are recommended for best performance and battery longevity.

But a common and frustrating question many users have is: how long does it take to charge a power bank?

The answer isn't always straightforward—it depends on several factors, from the mAh capacity to the type of charging input and cable you're using. In this comprehensive guide, we'll explore.

On average, a power bank can take anywhere from 2 to 12 hours to fully charge. For instance, a standard 10,000mAh power bank typically requires 4–6 hours when using a 10W charger, while larger capacities, like 20,000mAh, may need 8–12 hours. These estimates assume you're using a compatible charger.

But sometimes it takes a long time between charging up the power bank and actually using it. It can be weeks or even several months between two uses of the device. One common scenario is that of people who buy power banks for emergency situations. For example, you can get a power bank that has a.

Charging a power bank for the first time is similar to regular charging, but it's crucial to: Use the right charger and cable that match the input rating. Charge to 100% to calibrate the battery. Avoid using it while charging to prevent overheating. For a new 10,000mAh device, expect about 3.5 to 6.

So, how long does a power bank keep its charge?

A high-quality power bank can keep its charge for up to 6 months. While a low-quality power bank can hold its charge for up to 4 weeks. 1 Why Do Power Banks Lose Their Charge Over Time?

2 How To Make Power Bank Hold Its Charge Longer?

2.1 1. Use a.

A good power bank usually holds most of its charge for 4–8 weeks, shaped by self-discharge, temperature, and the pack's electronics. If you stash a portable battery in a drawer and grab it weeks later, you want it ready. The catch is that every lithium pack leaks energy over time. Some lose only a.
