Overview

Generators added 10.4 GW of new battery storage capacity in 2024, the second-largest generating capacity addition after solar. Even though battery storage capacity is growing fast, in 2024 it was only 2% of the 1,230 GW of utility-scale electricity generating capacity in the United.

In the United States, cumulative utility-scale battery storage capacity exceeded 26 gigawatts (GW) in 2024, according to our January 2025 Preliminary Monthly Electric Generator Inventory. Generators added 10.4 GW of new battery storage capacity in 2024, the second-largest generating capacity.

Over the next five years, the country will build nearly 67 gigawatts' worth of new utility-scale batteries, per data from research firm BloombergNEF, enough to send almost 284 gigawatt-hours of stored-up electricity back to the grid. Those are massive figures. Should the forecast bear out, the U.S.

- 3.8 GW of storage installed across all segments, 80% increase from Q3 2023
 - Residential installations hit all-time high HOUSTON/WASHINGTON, D.C., December 12, 2024 –The U.S. energy storage market continued its strong growth in Q3 of 2024, with the grid-scale segment setting a new Q3 record at.
- What is battery energy storage?

This is where Battery Energy Storage Systems (BESS) are stepping in to help transform the equation. By storing excess renewable energy during periods of overproduction and releasing it when demand rises, BESS allows clean energy to be dispatched on demand.

How big is battery storage in 2024?

The rapid deployment of utility-scale battery storage has been pivotal in this

growth trajectory. Notably, in 2024, the U.S. added 10.4 gigawatts (GW) of new battery storage capacity, marking a significant milestone in energy infrastructure development. Source: Solar Power World | Global Market Insights Inc.

Are solar and battery storage the future of electric power?

This surge aligns with broader trends in utility-scale electric-generating capacity, where solar and battery storage are projected to constitute 81% of the total additions, with solar alone contributing over 50%. Source: EIA While lithium-ion batteries currently dominate the market, alternative technologies are gaining traction.

How much battery storage capacity does a generator have in 2024?
