In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region.

The total cost of a BESS is not just about the price of the battery itself. It includes several components that affect the overall investment. Let's dive into these key factors: The battery is the heart of any BESS. The type of battery—whether lithium-ion, lead-acid, or flow batteries—significantly.
