# How much does a lithium battery energy storage system cost

## Overview

---

Are battery energy storage systems worth the cost?

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs associated with BESS is critical for anyone considering this technology, whether for a home, business, or utility scale.

How much does energy storage cost compared to lithium ion?

Cost: Thermal energy storage systems have an average capex cost of \$232/kWh, which is lower than lithium-ion for certain durations. Advantages: They can store energy for long durations at lower costs. However, these systems are less mature in many markets compared to lithium-ion. Cost: Compressed air storage has a capex cost of \$293/kWh.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

How much does a lithium ion battery cost?

On average, the cost of lithium-ion battery cells can range from \$0.3 to \$0.5 per watt-hour. For a 2MW (2,000 kilowatts) battery storage system, if we assume an average battery cell cost of \$0.4 per watt-hour, the cost of the battery alone would be  $2,000,000 * \$0.4 = \$800,000$ .

How much does battery storage cost in 2025?

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200-\$400 per kWh. This is because of new lithium battery chemistries.

Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power.

Is lithium ion a good choice for energy storage?

Advantages: Offers high energy storage capacity and is particularly effective for grid stability over long durations. Lithium-ion BESS remains a dominant choice due to its established supply chain and rapid cost decline, despite being more expensive than some alternatives for long-duration storage.
