Having made its closest approach to the sun on Wednesday October 29, comet 3I/ATLAS will soon be visible from Earth again—before it leaves our solar system. While the comet—first spotted in July—has spent the last few weeks on the other side of the sun from Earth, it is expected to soon become.

The comet will be visible for anyone with a telescope or very good binoculars in the hours before dawn. The telescope doesn't need to be anything extravagant to catch this object, but don't expect to see a spectacle like Hale-Bopp, the Great Comet of 1997. Still, this is a chance to see an object.

After 3I/ATLAS made its closest approach to the sun, the comet is expected to remain out of view of Earth until around December. Here's the latest. Comet 3I/ATLAS was expected to come within 130 million miles of the sun on Oct. 30. For the time being, 3I/ATLAS will remain on the opposite side of.

Are you considering mounting solar panels on a shipping container and wondering what to keep in mind?

This article offers a concise overview to help you understand the key considerations and shows you some real-world examples. Can you put solar panels on a shipping container roof?

Absolutely!.

3I/Atlas marks the third interstellar object ever discovered in our solar system; scientists found the interstellar object in July 2025, according to Space.com. As the comet nears its closest point to the sun in its orbit on Wednesday, Oct.

29, and amid a Harvard astronomer's hypothesis about.

Comet 3I/ATLAS tracker: How to follow interstellar object passing through Solar System live?

Comet 3I/ATLAS will be closest to the Sun on October 29 and will be observable through telescopes. Here is how you can track it. An interstellar comet is set to appear in the skies. A comet named 3I/ATLAS.
