Icelandic power station energy storage company costs

Overview

As of 2025, the average price for lithium-ion battery systems in Iceland hovers around \$150–\$200 per kWh. That's 10–15% higher than EU averages, thanks to those pesky import fees. But here's the kicker: Iceland's unique energy profile means batteries aren't just for grid backup. How much does a battery cost in Iceland?

As of 2025, the average price for lithium-ion battery systems in Iceland hovers around \$150–\$200 per kWh. That's 10–15% higher than EU averages, thanks to those pesky import fees. But here's the kicker: Iceland's unique energy profile means batteries aren't just for grid backup.

Does Iceland have a competitive electricity price?

Electricity prices for energy intensive industries in Iceland are relatively competitive at a global level. This is mainly due to the abundant and natural energy sources in Iceland, such as hydro power and geothermal energy. Only a few countries or regions in North America or Europe can benefit from similar energy sources.

Why are electricity costs high in Iceland?

In Iceland, the high electricity costs are driven by the costs of hydro power and geothermal energy sources, which have higher upfront investments than conventional fossil fuel power plants like gas or coal. However, they have lower operational costs.

Is Iceland a public power company?

In Iceland, most of the power companies are in public ownership. The National Power Company Landsvirkjun (state owned) holds the highest power generation share (71 %). Reykjavik Energy ON, another public company, contributes around 19 %. HS Orka, a partly-public owned power company, contributes around 7 % to the electricity generation.

Does Iceland have a power exchange?

Iceland: No power exchange exists in Iceland for selling excess electricity. Over 80% of the energy is sold through long-term Power Purchase Agreements (PPAs) with large users. The weighted average duration of PPAs is currently 15 years, while the longest PPA in Iceland is a contract with a duration of 40 years.

What is Iceland's electricity supply & demand?

Iceland is the world's largest green energy producer per capita and the largest electricity producer per capita, with approximately 55,000 kWh per person per year in electricity supply. In comparison, the EU average is less than 6,000 kWh.
