Inverter changed to 60V

Overview

Do I need a 60Hz inverter?

Here in the US, things run at 60Hz, in Europe and most other places around the world, things run at 50Hz. You'll most likely require a 60Hz inverter if you are running a device intended to run on US power. We like to go camping and travel quite frequently.

Can a single phase inverter output 240V 60Hz?

These single phase inverters can be programmed to output 240V 60Hz for North American applications. Couple with an Autotransformer to do neutral forming for 120/240V split phase applications. We can also stack these inverters in three phase configurations to do 230V/400V WYE (50Hz or 60Hz).

What are the disadvantages of a 12 volt inverter?

The disadvantage is that the 12 V inverter will draw 5 times the current a 60 V inverter draws for the same output power. This current needs to be supplied by the step-down converter. This will also incur additional losses in the step-down converter. I'd swap the 12 V inverter for a 60 V inverter. I had a hunch. I'll make the swap.
