Inverter power limit at noon

Overview

What is a power limit in a solar inverter?

The setting is percent-based. It is the desired active power limit divided by the nominal power of the inverter, as shown in the equation below. For example, this means if a user wants the inverter to only generate a maximum of 3.6kVa (for EEG2012, 70% of the kWp of the PV array) and the inverter has a nominal rating of 5kVA.

Can maximum inverter power limit grid feed-in?

The values of „maximum inverter power“ have always positive sign. Therefore they only limit the charging values for grid setpoint. They cannot limit the negative values for grid feed in. Using Grid feed-in → Limit system feed-in instead, also cannot solve this problem.

How do you calculate the power limit of a PV inverter?

It is the desired active power limit divided by the nominal power of the inverter, as shown in the equation below. For example, this means if a user wants the inverter to only generate a maximum of 3.6kVa (for EEG2012, 70% of the kWp of the PV array) and the inverter has a nominal rating of 5kVA. The user must calculate the percent as shown below.

Does maximum inverter power go back if grid setpoint is high?

If „maximum inverter power“ goes back to a higher value, the grid feed in also goes back if grid setpoint is that high. Nevertheless, I expect same behaviour for the “Limit system feed in”. This would allow high inverter power, high self consumption but only low grid feed in.

What is a control state in an inverter?

Each control state is a combination of the following three fields: AC output power limit - limits the inverter's output power to a certain percentage of its rated power with the range of 0 to 100 (% of nominal active power). CosPhi -

sets the ratio of active to reactive power.

How do I set a maximum power limit for a PV system?

If the grid operator requires limitation to a percentage of the nominal PV system power, select the option Max. xx % of the nominal PV system power and enter the required percentage. If the grid operator requires limitation to a maximum active power in kW, select the option max. xx kW and enter the maximum permitted active power in kW.
