

## Kongres Container

# Irish energy storage solar engineering company

## Overview

---

What is energy storage Ireland?

Energy Storage Ireland is a representative association of public and private sector organisations who are interested and active in the development of energy storage in Ireland and Northern Ireland. Delivering the energy storage technologies to enable a secure, carbon free electricity system on the island of Ireland by 2035.

How many battery storage projects are there in Ireland?

More currently, according to our colleagues at Solar Media Market Research, which produces the Republic of Ireland Battery Storage Project Database Report, there are now 545MW and 609MWh of utility-scale BESS projects already operational in the Republic of Ireland.

Why do we need wind & solar energy in Ireland?

Wind and solar energy play a key role in Ireland's transition from fossil-fuel-based electricity generation. But these precious resources will need to be stored for times when the wind doesn't blow, or the sun doesn't shine, says the ESB's Clare Duffy.

Why should Ireland Invest in a 'home-grown' energy system?

This integrated approach will also deliver security of supply by reducing Ireland's dependence on fossil fuels from more volatile parts of the world and allow us to develop "home-grown" energy from our own natural resources.

When will solar power projects start in Ireland?

The first projects were announced in early 2021 for sites in Inchicore, County (Co) Dublin (30MW/60MWh) and Aghada, Co Cork (19MW/38MWh), as reported by our sister site Solar Power Portal.
