Is it legal to replace new energy with a large battery cabinet

Overview

The case centered on New Leaf's proposed battery energy storage facility in Duxbury, Massachusetts. The facility, which is not connected directly to any solar generation, will draw power from the local electric grid and store that energy until it is later discharged back to the grid when needed.

The case centered on New Leaf's proposed battery energy storage facility in Duxbury, Massachusetts. The facility, which is not connected directly to any solar generation, will draw power from the local electric grid and store that energy until it is later discharged back to the grid when needed.

A&K Partner Nina Pickering-Cook and Associate Marissa Grenon Gutierrez secured a key victory for client New Leaf Energy ("New Leaf") in a landmark win for renewable energy development. In a case of first impression, Land Court Judge Lauren Reznick ruled on summary judgment that standalone battery.

The One Big Beautiful Bill Act (OBBBA), signed into law on July 4, 2025, has sent ripples through the renewable energy sector, particularly affecting solar and battery storage industries. This legislation reshapes tax incentives, imposes strict supply chain rules, and alters the trajectory of clean.

Let's face it - the energy storage industry is hotter than a lithium-ion battery in July. With global capacity projected to reach 1.3 TWh by 2030, companies are racing to install systems faster than you can say "electrolyte imbalance." But here's the kicker: 83% of project delays now stem from.

NFPA 855, Standard for the Installation of Stationary Energy Storage Systems, contains requirements for the installation of energy storage systems (ESS). An ESS system is a technology that helps supplement renewable energy sources (such as wind and solar), support the country's electrical.

As the demand for renewable energy sources continues to rise, battery energy storage systems (BESS) have emerged as a critical component in the transition to a sustainable energy future. Westwood is at the forefront of environmental permitting in states across the nation, helping clients navigate.

Tucked into the federal legislation passed in early June was a provision that should be of interest to those of us in the renewable energy business focusing on large battery energy storage system (“BESS”) projects. The Fiscal Responsibility Act of 2023 signed by President Joe Biden on June 3.
