

## Kongres Container

# Lithuania container energy storage cabinet

## Overview

---

Who manages Lithuania's electricity storage facilities?

At the end of July 2021, the Government of the Republic of Lithuania appointed Energy cells, a company of the EPSO-G Group, as the operator of the instantaneous isolated operation electricity reserve for Lithuania's electricity storage facilities and entrusted it with the management of the electricity storage facilities system.

Why is electricity storage important in Lithuania?

Lithuania's system of electricity storage facilities is essential to ensure the security of Lithuania's energy system and its ability to operate in isolated mode.

How will Lithuania's energy storage system work?

The energy storage system, which will provide Lithuania with an instantaneous isolated operation electricity reserve until synchronisation with the continental European networks (CEN), will be used after synchronisation for the integration of energy produced from renewable sources.

Which power plant provides energy storage in Lithuania?

Kruonis Pumped Storage Plant provides energy storage, averaging electrical demand throughout the day. The pumped storage plant has a capacity of 900 MW (4 units, 225 MW each). Kaunas Hydroelectric Power Plant has 100 MW of capacity and supplies about 3% of the electrical demand in Lithuania.

Why should Lithuania invest in batteries?

It will also enable Lithuania to disconnect from the Russian controlled electricity grid and synchronize with the continental European electricity grid. In case of accidents, batteries will provide instantaneous electricity reserve service in less than one second. In the future, batteries will help to integrate renewable energy sources.

When will Lithuanian power plants start supplying power?

Lithuanian power plants currently operating in the IPS/UPS system can start supplying power within 15 minutes. Once synchronised with the CEN system, the energy storage facilities will be able to store electricity generated by solar or wind power plants and feed it into the grid when needed.
