# Madagascar Energy Storage Power Generation

## Overview

---

Does Madagascar have solar energy?

In Madagascar, solar energy facilities have recently been developed. Due to their cost, solar heating systems are not really enhanced. The photovoltaic system represents less than 1% of the power generation mix and has only been integrated since 2006. In March 2016, Madagascar joined the World Bank Group's Scaling Solar program.

Which energy process is available in Madagascar?

As no energy process for Madagascar is available, we considered the generic ones, for fuel oil steam turbine and diesel combustible engine and hydrodam power plant. Reflecting Malagasy conditions and the efficiencies, transport of raw materials have been included in the process.

Does Madagascar have a photovoltaic system?

The photovoltaic system represents less than 1% of the power generation mix and has only been integrated since 2006. In March 2016, Madagascar joined the World Bank Group's Scaling Solar program. About 30-40 MW solar plants are planned in this program in order to reduce daily load shedding and interruptions of electricity distribution.

What percentage of Madagascar's electricity is renewable?

In 2012, renewable energies represent 56.57% of the electricity mix, although Madagascar has a high but underexploited potential. Considering the high potential in hydropower, the retained assumptions are a climb of 15% for the hydropower and 5% for the photovoltaic production, until 2050.

How much energy does Madagascar use a year?

However, energy consumption per inhabitant remains one of the lowest in the world, around 0.315 toe/year in this area , as the world average is around 1.6 toe/year. During the last two years Madagascar is ranked as the 188-th over

189 economies in terms of getting electricity, .

Why does Madagascar have a low rate of electricity?

Only less than 1% of this demand is supplied by other renewable energy sources. This high share of wood energy is explained by its accessibility and its low cost for the population. Madagascar has a low rate electricity access due to its high price and the insufficient quantity production.
