Mozambique upgrades power supply for 5G base stations

Overview

What is 5G power supply?

The development of 5G networks brings new challenges for powering base stations. MPS has developed a powerful new power supply solution for 5G telecom applications that ensures stable and efficient power delivery, accurate current sensing, and highly efficient power factor correction to maintain a stable output voltage amid large load variations.

Which MP's products are best for 5G?

Several innovative, high-performance MPS products, including the MPF32010, MCS180x family, MP18831, MPF32020, MP023 and MPQ27800 New 5G networks bring new challenges for powering base stations. MPS has developed a powerful, efficient new power supply solution for 5G telecom applications using several innovative products.

What are the components of a 5G base station?

Baseband Unit (BBU): Handles baseband signal processing. Remote Radio Unit (RRU): Converts signals to radio frequencies for transmission. Active Antenna Unit (AAU): Integrates RRU and antenna for 5G-era efficiency. 2. Power Supply System This acts as the "blood supply" of the base station, ensuring uninterrupted power. It includes:

Why are small cells a new part of 5G?

The need to increase the number of base stations to provide wider and more dense coverage has led to the creation of small cells. Small cells are a new part of the 5G platform that increase network capacity and speed, while also having a lower deployment cost than macrocells.

What is a 5G Brain Center?

Often referred to as the brain center, this includes: Baseband Unit (BBU): Handles baseband signal processing. Remote Radio Unit (RRU): Converts

signals to radio frequencies for transmission. Active Antenna Unit (AAU): Integrates RRU and antenna for 5G-era efficiency. 2. Power Supply System.

What is the trend in 5G radio applications?

The trend in 5G radio applications is to use higher frequencies and shorter wavelengths. Increasing the frequency increases the speed of sending/receiving signals and helps shrink the size of the antenna, which in turn shrinks the size of the cell.
