New Energy Battery Cabinet Upgrade

Overview

Who is RK new energy?

RK New Energy is a leading professional battery energy storage system manufacturer. Our cutting-edge technology enables businesses and homes to control their energy consumption like never before. Our solutions ensure uninterrupted power supply during power outages and allow efficient use of renewable energy.

What is a “drop-in replacement” battery storage system?

Thus, the best solution to this dilemma is a “drop-in replacement” battery storage system that not only enables the incorporation of alternative battery chemistries, but also functions in an existing UPS system without the need for additional modifications.

What is a zinc five battery cabinet?

ZincFive’s BC Series Battery Cabinets, while housing NiZn batteries with all of their associated benefits, adapt the lead-acid charging system to the needs of the nickel-zinc battery. The battery cabinets’ intelligent charging & monitoring system emulates the profile of lead-acid batteries to the UPS.

How does a NiZn battery cabinet work?

Since the UPS doesn’t “know” that the NiZn battery string has a different chemistry, it operates the string just as it would for its previous lead-acid inhabitants. This way, ZincFive’s UPS Battery Cabinet’s specialized profile allows operators to use NiZn battery cabinets as “drop-in” replacements.

Should a data center switch from lead-acid batteries?

While NiZn batteries’ characteristics give data centers more than enough reason to make the switch from lead-acid, one challenge often stands in the way: the average data center UPS system was not built with them in mind. Rather, most data centers were designed specifically to charge lead-acid

batteries.

Are NiZn batteries a good choice for data center backup?

As rack-level compute density rises, so do the requirements for backup power in smaller, safer footprints. With their high power density, longer lifespan, sustainability and greater reliability, NiZn batteries are the ideal choice for backing up the increasing data center loads.
