# New Energy Storage Latest

## Overview

---

New policy introduced in February 2025 requires wind and solar payment mechanisms to move toward more market-based structures, where 100% of wind and solar generation is to be traded in the wholesale market with local governments left to define their own implementation details by the end of the year. How long does energy storage last in 2024?

Highlights from the 2025 Energy Storage Report According to the NEA, 2024 saw the addition of 42.37 GW / 101 GWh in new NES capacity. The average storage duration rose to 2.3 hours, reflecting ongoing improvements in system design and grid integration.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

Which companies have energy storage projects?

Quidnet Energy, ENBW, and Peak Energy have energy storage projects in the works in the U.S. and Europe. Google has partnered with Energy Dome to scale long-duration carbon dioxide battery storage to advance its carbon-free goals. Tesla's \$3.4 billion battery project with LG Energy leads tech business news this week, along with moves by Toshiba.

Why is energy storage important in China?

[Photo/Ren Yigang] As China accelerates the shift toward renewable energy and builds a new type of power system, energy storage has become indispensable.

Does China's new energy storage system guarantee supply security?

The trial effectively validated the system's capacity to guarantee supply

security. By the end of July, within the service area of China's State Grid, the maximum dispatchable power from new-type energy storage reached 64.23 GW, with a real-time maximum discharge of 44.53 GW, up 55.7 percent from last year.

What drives energy storage project development?

Globally, energy storage project development is increasingly driven by the utility-scale segment, with mandates and targeted auctions driving gigawatt-hour projects in markets like China, Saudi Arabia, South Africa, Australia and Chile.
