# New energy storage power station on the user side

## Overview

---

On September 18, the largest user-side energy storage power station in Jiangsu Province — a 240 MWh user-side energy storage project at Jiangsu Jingjiang Special Steel Co., Ltd. — was officially connected to the grid. What is the largest energy storage power station in China?

The 101 MW/202 MW•h grid side energy storage power station in Zhenjiang, Jiangsu Province, which was put into operation on July 18, 2018, is currently the largest grid side energy storage power station project in China and the world's largest electrochemical energy storage power station.

What is Ningxia power's energy storage station?

On March 31, the second phase of the 100 MW/200 MWh energy storage station, a supporting project of the Ningxia Power's East Ningxia Composite Photovoltaic Base Project under CHN Energy, was successfully connected to the grid. This marks the completion and operation of the largest grid-forming energy storage station in China.

How will new energy storage power stations affect Nanjing's power grid?

These three new energy storage power stations on the side of the power grid can increase the short-term emergency peak capacity by 200,000 kilowatts for the Nanjing power grid, meeting the daily electricity demand of 50,000 households.

How can energy storage power stations be improved?

Evaluating the actual operation of energy storage power stations, analyzing their advantages and disadvantages during actual operation and proposing targeted improvement measures for the shortcomings play an important role in improving the actual operation effect of energy storage (Zheng et al., 2014, Chao et al., 2024, Guanyang et al., 2023).

How can energy storage power stations be evaluated?

For each typical application scenario, evaluation indicators reflecting energy storage characteristics will be proposed to form an evaluation system that can comprehensively evaluate the operation effects of various functions of energy storage power stations in the actual operation of the power grid.

How does a energy storage station work?

"The energy storage station will charge during the low load period, discharge to the grid during the peak period, and participate in grid interaction through grid frequency modulation and providing emergency backup power supply.
