Norwegian thin film solar module manufacturer

Overview

Are Norwegian solar panels sustainable?

In the landscape of renewable energy, Norwegian solar panels have emerged as a beacon of innovation and sustainability. Norway, primarily known for its oil and gas reserves, is making significant strides in solar energy, marking its transition towards more sustainable energy sources.

What are solar modules made of?

Solar modules are made of highly abundant materials such as silicon, glass and aluminum. T1 Energy is building a domestic solar supply chain. Ultra-pure single crystal silicon with excess negative charge from phosphorus. N-type silicon delivers high lifetime, light induced degradation free power.

What are thin-film solar cells used for?

Thin-film solar cells are commercially used in several technologies, including cadmium telluride (CdTe), copper indium gallium diselenide (CIGS), and amorphous thin-film silicon (a-Si, TF-Si). In rigid thin-film modules, the cell and the module are manufactured in the same production line.

Do you need a reliable solar supplier in Norway?

The Norwegian solar market enjoys a healthy presence of solar equipment manufacturers and distributors. They deal with the supply of solar panels and several other components. Do you need a trustworthy supplier for your current or next project?

If the answer is yes, consider yourself lucky because you are in the right place.

Does Norway have a solar industry?

According to a recent report, there is a considerable rise in public support for the Norwegian solar industry. As of December 2019, Norway had a cumulative

installed solar capacity of 120 Megawatts. This capacity came into being through the addition of 51 Megawatts, the highest added capacity in a single year.
