PV and energy storage policy

Overview

This resource aims to provide an overview of program and policy design frameworks for behind-the-meter (BTM) energy storage and solar-plus-storage programs and examples from across the United States.

This resource aims to provide an overview of program and policy design frameworks for behind-the-meter (BTM) energy storage and solar-plus-storage programs and examples from across the United States.

The Clean Energy States Alliance (CESA) is a national, nonprofit coalition of public agencies and organizations working together to advance clean energy. CESA members—mostly state agencies— include many of the most innovative, successful, and influential public funders of clean energy initiatives.

The Solar Energy Industries Association (SEIA) has unveiled a new policy agenda calling for US grid reforms, domestic supply chain investment, and wider solar and storage deployment to meet surging US power demand. From pv magazine USA SEIA has a new policy agenda centered on electric reliability.

The document lists eight policy areas that SEIA said are ‘critical’ for local, state and federal authorities . Image: Erlend Bjørtvedt, Wikimedia Commons. The US Solar Energy Industries Association (SEIA) has released a policy blueprint that it claims would “strengthen the reliability of America’s.

This resource aims to provide an overview of program and policy design frameworks for behind-the-meter (BTM) energy storage and solar-plus-storage programs and examples from across the United States. This information is intended to build CRITFC’s understanding of potential policies and program.

Tesla’s energy division continued its growth trajectory, marking its largest quarter yet as it deployed 12.5 GWh of energy storage while outlining plans for new factories and product lines. Utility Georgia Power is forging ahead with plans for battery energy storage systems (BESS), Canadian.

As the grid transitions away from traditional fossil fuels towards intermittent renewable resources, energy storage becomes an important asset for energy management, in order to maintain grid reliability and price certainty, and to ensure continued supplies of power through peak demand periods.
