Portable light source

Overview

What is Optim portable LED light source (PLS)?

The Optim Portable LED Light Source (PLS) transforms your rigid sinuscope or flexible endoscope by delivering exceptional light intensity and quality in a compact unit. Eliminates the burden of external light sources and cables so you can go anywhere the exam is needed. Ultra bright, LED-based illumination when you need it most.

How does portable light sources work?

This mod replicates the features found in most lighting mods like Optifine where non-block items give off light. However, unlike those client-side rendering mods, Portable Light Sources no produce real light. this means blocks and mechanics sensitive to light will respond correctly.

What is a portable light for photography?

A portable light for photography is a light that attaches onto the camera, allowing for easy maneuvering and portability. It is very easy to use, with a rotate switch to turn it on and off, and adjust the brightness. It also has a battery life indicator, so you always know how much life it has left, preventing unexpected dead batteries.

What is a es201 light source?

It provides brilliant LED lighting for a variety of applications. Powered by a long lasting, rechargeable lithium battery, this light source is a truly innovative and mobile solution uninhibited by wires. Unlike other portable light sources, the ES201 delivers these breakthrough capabilities - and much more - at a highly economical cost.
