Serbia Power Grid Energy Storage Project

Overview

Fortis Energy plans to begin work on the 270MW PV/72MWh BESS project in Q2 2026. Image: Fortis Energy. Fortis Energy has secured a construction permit for a 270MW PV plant combined with a 72MWh battery energy storage system (BESS) in Serbia.

Investments in battery energy storage systems (BESS) is ramping up around the world and Serbia is now making its first steps. Annual installations have increased more than 12 times in just four years, projects for an overall 11.5 GWh were announced in only three European countries, and last year.

Fortis Energy, a Turkish renewable energy developer, has received a pivotal construction permit for a major solar-plus-storage power project in Serbia. The 270 MW photovoltaic plant, coupled with a 72 MWh battery storage system, marks one of the Balkans' most significant strides toward clean.

Serbia's national power utility Electric Power of Serbia (EPS) produces nearly 70 percent of the country's electricity from coal and nearly 27% percent from hydropower, with approximately 4% coming from private developers in wind and solar energy. Serbia heavily subsidizes coal and electricity.
