What is a 12V lithium battery pack?

Most commonly, a 12V lithium battery pack is made up of four lithium-ion cells, each with a nominal voltage of 3.7V. This configuration allows the pack to reach a total nominal voltage of approximately 14.8V when fully charged and around 12V when discharged.

How many cells are in a 12V battery pack?

Some packs may include additional cells for higher energy capacity or specific voltage requirements, but the standard configuration for a 12V battery is four cells. For example, a small electric vehicle or a solar power storage system commonly uses a 12V lithium battery pack with four cells.

What is a battery pack?

They may be configured in series, parallel or a mixture of both to deliver the desired voltage, capacity, or power density. Packs are identified by cell size, number of cells, battery structure, chemistry, chargeability, capacity, and

voltage rating. Lithium-Ion Battery Products - Battery Packs are in stock at Digikey.

How many cells are in a battery pack?

The specific number of cells in a battery pack can vary based on the desired voltage and capacity. Higher voltage packs require more cells in series. For instance, a 24V pack usually contains 8 cells, while a 48V pack typically consists of 16 cells.
