Solar Container Freight Rates

Overview

Short version: From 2024, it costs between \$2,800 and \$5,500 to ship a 20-foot container of solar panels around the world, depending on origin, destination, fuel prices, and demand. The 40-foot container, which is the one used for larger installations, ranges from \$4,500 to \$8,000.

Short version: From 2024, it costs between \$2,800 and \$5,500 to ship a 20-foot container of solar panels around the world, depending on origin, destination, fuel prices, and demand. The 40-foot container, which is the one used for larger installations, ranges from \$4,500 to \$8,000.

Whether you're a solar startup importing your first bulk order from Shenzhen or a do-it-yourselfer outfitting a container home in the Arizona desert, the cost of shipping solar panels in a container is more than just a line item — it can make or break your project budget. This guide is designed.

Ocean freight rates are rising in Q2 2025, at an alarming rate—again. Shipping a container from Shanghai to Rotterdam now costs \$6,000+, up from just \$1,800. According to Freightos, this spike isn't just a seasonal fluctuation—it reflects deep, structural disruptions across the maritime logistics.

Freight costs, which represent around 4% of a solar module's total costs, are increasing on trade lines between the Far East and the US West Coast, Northern Europe, and Mediterranean region. Freight container shipping spot rates have increased to their highest level since 2022, according to data.

FreightCenter connects you with top-rated carriers to ship solar panels safely and affordably, whether you're a manufacturer, distributor, or homeowner. LTL shipping is used for small freight or when the items don't require the use of an entire trailer. Your freight is combined with other shipments.

Then join Freightos to compare, book, and manage your upcoming shipments using our freight rate calculator. Loading. Instantly compare air, ocean, and trucking freight quotes from 75+ providers with the perfect balance of price and transit time. Refreshingly easy logistics management with milestone.

Solar panels are made of solar cells, that are produced from materials like phosphorus, boron, or silicon. These chemicals create energy through something that is called a photovoltaic effect. The phosphorus creates a negative charge, while boron creates a positive charge. This allows photons to be.
