Solar energy storage configuration in the United States

Overview

The latest update contains data on roughly 4.5 million individual systems installed through the end of 2024 and provides project-level data covering a wide range of system technical characteristics, installed prices, financing and installer level data, and customer segmentation details, including estimated household incomes. How much energy is stored in the United States?

According to Wood Mackenzie, there is 83 GWh of installed energy storage capacity in the United States, including nearly 500,000 distributed storage installations. Current forecasts show that U.S. storage capacity is expected to reach 450 GWh by 2030, falling short of the capacity required to support our nation's energy needs.

Will US storage capacity reach 450 GWh by 2030?

Current forecasts show that U.S. storage capacity is expected to reach 450 GWh by 2030, falling short of the capacity required to support our nation's energy needs. The whitepaper calls on states, regional transmission organizations, and the federal government to take action to accelerate storage deployment and manufacturing. These actions include:

What is the largest solar project in the United States?

With a planned photovoltaic capacity of 690 megawatts (MW) and battery storage of 380 MW, it is expected to be the largest solar project in the United States when fully operational. Battery storage. We also expect battery storage to set a record for annual capacity additions in 2024.

How many GW of battery storage are there in the United States?

As of 2023, there is approximately 8.8 GW of operational utility-scale battery storage in the United States. The installation of utility-scale storage in the United States has primarily been concentrated in California and Texas due to supportive state policies and significant solar and wind capacity that the storage resources will support.

Which energy storage technologies are used in the United States?

Batteries and pumped hydro are the main storage technologies in use in the U.S., according to the number of storage projects in the country in 2023. Discover all statistics and data on Energy storage in the U.S. now on [statista.com](https://www.statista.com)!

How much energy storage will Maine have by 2021?

Maine also set its goal in 2021 to achieve 400 MW of installed storage capacity by 2030, with an interim target of 300 MW by 2025. New York originally set a goal to procure 3 GW of energy storage by 2030, but New York Governor Kathy Hochul most recently announced plans to double that goal to reach 6 GW by 2030.
